

Grad Slam participants, please be aware of the following:

- Publically disclosing a patentable invention *before* filing a patent application has the potential to negatively impact your ability to secure patent protection at a later date. Of course, the importance of having patent protection for the successful commercialization of a new invention is industry-dependent.
- As a condition of employment, all UC employees, including MS/PhD candidates and Post-Docs, are obligated to promptly report and fully disclose all potentially patentable inventions to their campus' technology transfer office. The UCLA technology transfer office is the Office of Intellectual Property and Industry Sponsored Research. Information on how to disclose inventions can be found at this website: <http://oip.ucla.edu>
- Presenting ideas, inventions, software, technology, processes or associated intellectual property in Grad Slam that are obtained from an employer other than UC could put you at risk of violating the terms of your employment.

If you have any questions about intellectual property protection, please contact OIP-ISR at: innovation@research.ucla.edu.
